C3 Generative AI
On Cloud Marketplaces

Unified Knowledge Source for Accelerated Time to Insight

C3 Generative AI enables enterprise users to rapidly locate, retrieve, and act on insights in enterprise data and is available on Cloud Marketplaces with a 14-day free trial.

Rapid Access
to relevant, critical, and high-value insights previously siloed across disparate systems

Fast Configuration
through guided, self-service onboarding and configuration workflows

Enterprise Grade
data security and access controls that meet strict enterprise requirements

Future Proof
investments with an LLM-agnostic architecture and pre-built connectors to enterprise systems

Today, enterprise data and expertise are often spread out and siloed in disparate datastores, documents, and with individuals. As a result, enterprise users spend up to 20% of their time searching for critical information, yet over two-thirds of enterprise data is still never utilized.

C3 Generative AI enables enterprise users to rapidly access and act on insights stored in enterprise data, including from text files (.txt, .rtf), Word documents (.doc, .docx), PDF files (.pdf), PowerPoint presentations (.pptx), web pages (.html), and Markdown (.md). Users can upload documents, tune search performance, add new users, and start using C3 Generative AI in just a few clicks.

C3 Generative AI is an enterprise-ready solution with consistent, hallucination-free responses, traceability to source documents, and full enterprise access controls.

Feature Summary

- **In-app onboarding demo and self-service configuration workflows** help users get started in just a few steps

- **Natural language search interface** provides rapid access to information across documents in enterprise and external information systems

- **Deterministic responses** via a retrieval-augmented architecture that separates the enterprise knowledge base from the LLM

- **Traceable to ground truth** for every insight based on the corpus of enterprise data

- **No LLM-caused data leakage** with access controls applied to user queries and separation of LLM from enterprise data

- **Hallucination-free responses** with embedded relevance scoring and a solution that answers "I don't know" when relevance threshold is not met

- **Available on Cloud Marketplaces** with a 14-day free trial
